Plastoplan is specialised in the distribution of high-quality technical plastic granulates by renowned manufacturers. We provide the manufacturing industry with a comprehensive service in the connection with the optimal choice, supply and manufacturing of plastics. We support our partners in their process from the vision to the series production of a product. Thanks to our own warehouses and our technically experienced team on site, our clients further profit by the resources of a strong international group. We can reduce your supply chain of raw materials to a minimum – to a ONE-STOP-SHOP.

SAX™ Polymers is fast, efficient, flexible and offers a wide range of compounds, masterbatches and services from a single source.

The ISO 9001-certified company with production sites in Bucharest (Romania), Vienna (Austria) and Oberriet (Switzerland) offer customer-tailored compounds alongside with its standard technical plastics programme and masterbatches.

Plastic granulates are adapted to meet customer needs and can be coloured, refined or directly modified with reinforcing materials. SAX™ Polymers produces compounds with glass fibres, glass beads, UV protection, flame protection, colours, effects of all kinds and much more - all under one roof. All technical thermoplastics can be processed into high-quality compounds with the latest twin-screw extruders.

Coloring

Masterbatch

The SAX™ color competence center is equipped with modern infrastructure, and the capacity for all required functionalities of plastics coloration.

Masterbatch

Color-
Masterbatch

Effect-
Masterbatch

Combination-
Masterbatch

SAX™ batches are quality color concentrates for many plastics and manufacturing processes and are divided into 4 groups: color, additive effect composite masterbatch and combinations thereof.

They are individually tailored depending to the application and can be adjusted in every conceivable shade in countless effects. Currently, more than 6000 recipes are available. This enormous variety enables maximum conformity with material and design specifications.

Thanks to the modern infrastructure also small quantities of 1kg to large quantities can be easily covered with the SAX™-Batch.
